Expanded Options for Duct Gaskets
*Adhesive Applications Provides New Size
And Shape To Their HVAC Tape Solutions.*

Easthampton, MA, March 2010 – Adhesive Applications recently added two new options to their line of pressure sensitive tapes and sealants for HVAC. Focusing on their innovative one-piece duct gaskets, the company now provides die-cut squares and circles with large 26” inside diameter.

These pre-cut gaskets are ideal for airtight seals in HVAC duct work. Polyethylene foam is coated on one side or both, with a high tack adhesive and features a stronger, easy-to-work-with release liner resists tearing and cracking for quick removal. With the addition of these new options, the company now provides circle, rectangle, and square gaskets with inside dimensions ranging from 4” to 26”. Custom sizes are also available.

In addition to duct gaskets, Adhesive Applications also provides other HVAC tape solutions, including double and single film tapes, transfer adhesives, PermaSTIK™ Ultra High Bond (acrylic foam tape), PE foam tapes, and PVC foam tapes. The company can also create custom products, based on a specific application, including gasketing, mounting, bonding, sealing, splicing, laminating, insulating, wire wrapping, and surface protection masking.
