

FOR IMMEDIATE RELEASE

New Double-Coated Supported Silicone Tape

*Adhesive Applications Introduces New,
Advanced Silicone Tape Configuration*

Easthampton, MA, September 2011 – Adhesive Applications announces immediate availability of a new double-coated silicone pressure sensitive adhesive. The supported adhesive is ideal for applying directly to sheets of silicone or foam, as well as for converters who are die cutting or laminating.

“Microfluidic applications are becoming more prevalent where silicone pressure sensitive adhesives are used to laminate multiple layers of polymers that have intricate patterns,” stated David Premo, VP/General Manager, Adhesive Applications.

Some key benefits of this new supported silicone tape include easier liner removal, reduced processing time, longer shelf life, can remove slugs after die cutting, can be laser cut, and bonds easily to most substrates.

The base product is listed as PolySil™ NT-1001-1DC11 and is configured with 1 mil silicone PSA on both sides of 1 mil PET. It can also be custom-made with more adhesive on one or both sides.
